Communication examples

of

controller UC-5N MODBUS network communication protocol

For example, the station number of the controller is 247(F7H, default station number)

1: Read input status register

Function code: 02H

Broadcast is not supported.

Address	Description	Example	Meaning(digits in this column is decimal)
0000	Input switch status	F702000000086D5A	When reading register, must follow the
			principle to read 8 bits (1byte).

Note: address and data are all hexadecimal.

2: Read holding registers

(UC-5N ignore data length field, it only supports one data that read start address pointing to)

Function code: 03 H

Broadcast is not supported.

address	Description	Example	Meaning
			(the figure in this column is decimal figure)
0000	Station number	F7030000001909C	Red- station number; Green –function code;
0001	MODBUS protocol type	_	Blace- data address to be read; orange-fixed
			data length 1; Blue-CRC check code.
0002	Communication Baud rate	1	Preserved address, cannot be read out.
0003	Parity		Preserved address, cannot be read out.
0010	Controller model	F703001000019159	Response: F70302 <mark>0005</mark> 10FE
0011	Serial number (low)	F70300110001C099	Response: F70302 <mark>5678</mark> 4FD3.
0012	Serial number (high)	F703001200013099	Response: F7030212347D26. Combine the
			high and low order byte, serial number
			should be 12345678.
0013	software version		Response: F703020001B191,
			version number is 0.1
			The read digit is the response data.
0014	Language	F70300140001D098	
0015	System protection password	F703001500019156	Response F70302270F2BA5, password is
			9999
0020	System monitoring status	F703002000019156	Response F703020001B191. Please refer to
	register		protocol for detailed bit definition.
0021	Power off protection function		Preserved address, cannot be read out.
0022	Power off protection voltage	_	Preserved address, cannot be read out.
0023	External control	F703002300016156	Response F70302004EF065. 4E is ASCII code

			of English letter 'N', which means external
			control function is OFF.
0024	Oil level monitoring setting		Preserved address, cannot be read out.
0025	Air pressure monitoring	F703002500018157	Response F70302004EF065. 4E is ASCII code
0023	7th pressure monitoring	1703002300010137	of English letter 'N', which means Air
			pressure monitoring function is OFF.
0100	Current status of channel 1	F703010000019160	Response F70302004331A0. 43 is ASCII
		.,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,	code of English letter 'C', which means
			current status of channel 1 is in LUBE state.
0110	Lubrication control mode of	_	Preserved address, cannot be read out.
	channel 1		
0111	Lubrication control parameter	F70301110001C165	Response F70302000AF056.
	of channel 1 (low)		
0112	Lubrication control parameter	F703011200013165	Response F7030200007051. Combine the
	of channel 1 (high)		low (000A) and high order (0000) byte,
			lubrication control parameter is 0000000A
			(decimal value is 10)
0113	Lubrication remaining	F7030113000160A5	Response F7030200073193.
	parameter of channel 1 (low)		
0114	Lubrication remaining	F70301140001D164	Response F7030200007051. Combine the
	parameter of channel 1 (high)		low (0007) and high order (0000) byte,
			lubrication remaining parameter is
0100	De la contrata del contrata de la contrata de la contrata del contrata de la cont	F70001000010011	00000007.
0120	Pause control mode of	F7030120000190AA	Response F70302005471AE. 54 is ASCII code
	channel 1		of English letter 'T', which means PAUSE control mode is TIMER.
0121	Pause control parameter of	F70301210001C16A	Response F7030256784FD3.
0121	channel 1 (low)	170301210001C10A	Response 170302307041 D3.
0122	Pause control parameter of	F70301220001316A	Response F7030212347D26. Combine the
	channel 1 (high)		low (5678) and high order (1234) byte,
	, , ,		PAUSE control parameter is 12345678H.
0123	Pause remaining parameter	F7030123000160AA	Response F703024567032B.
	of channel 1 (low)		
0124	Pause remaining parameter	F70301240001D16B	Response F7030210233C48. Combine the
	of channel 1 (high)		low (4567) and high order (1023) byte,
			PAUSE remaining parameter is 10234567H.
0130	Pulse current on time of	F70301300001916F	Response F703020014705E. Current on
	channel 1		time is 0014, convert to decimal value will
			be 20 (0.2 s)
0131	Pulse interval time of	_	Preserved address, cannot be read out.
	channel 1		
0132	Pulse ratio of channel 1	F7030132000130AF	Response F703020001B191. Pulse ratio is
			1:1
0133	Fine adjustment for oil	F70301330001616F	Response F7030200007051. Adjustment is

	projection for channel 1		0.
0140	Monitoring signal level setting	_	Preserved address, cannot be read out.
0141	Monitoring signal status —		Preserved address, cannot be read out.
0142	Signal monitoring parameter	F703014200013174	Response F703020005B052. Monitoring
	of channel 1		preset parameter is 5min
0143	Signal monitoring remaining —		Preserved address, cannot be read out.
	parameter of channel 1		
0144	signal counter	_	Preserved address, cannot be read out.

3: Set single register Function code: 06H

Except address 0000, all the other addresses support broadcast.

(Broadcast is supported) 0001 MODBUS protocol type — 0002 Communication Baud rate F 0003 Parity F 0010 Serial number (low) — 0011 Serial number (high)	F70600000015C9C — F70600024B000A6C F7060003004F2CA8 — —	(the figure in this column is decimal figure) Change station number to 1 Preserved address, cannot be read out. Set baud rate 19200(4B00H) Odd parity 'O' (ACCII code: 4FH) Preserved address, cannot be read out. Preserved address, cannot be read out.
(Broadcast is supported) 0001 MODBUS protocol type — 0002 Communication Baud rate F 0003 Parity F 0010 Serial number (low) — 0011 Serial number (high)	 F7060002 <mark>4B00</mark> 0A6C F7060003 <mark>004F</mark> 2CA8	Preserved address, cannot be read out. Set baud rate 19200(4B00H) Odd parity 'O' (ACCII code: 4FH) Preserved address, cannot be read out.
0001 MODBUS protocol type — 0002 Communication Baud rate F 0003 Parity F 0010 Serial number (low) — 0011 Serial number (high) —	F70600024B000A6C F7060003004F2CA8	Set baud rate 19200 (4B00H) Odd parity 'O' (ACCII code: 4FH) Preserved address, cannot be read out.
0002 Communication Baud rate F 0003 Parity F 0010 Serial number (low) - 0011 Serial number (high) -	F70600024B000A6C F7060003004F2CA8	Set baud rate 19200 (4B00H) Odd parity 'O' (ACCII code: 4FH) Preserved address, cannot be read out.
0003ParityF0010Serial number (low)-0011Serial number (high)-	F7060003 <mark>004F</mark> 2CA8	Odd parity 'O' (ACCII code: 4FH) Preserved address, cannot be read out.
0010 Serial number (low) — 0011 Serial number (high) —	_	Preserved address, cannot be read out.
0011 Serial number (high) -		
` ' ' '	_	Preserved address, cannot be read out
	_	
oo12 software version –		Preserved address, cannot be read out.
0013 Language F	F7060013 <mark>0001</mark> AD59	Set language: English
0014 System protection password F	F7060014 <mark>270F</mark> 86AC	New password is decimal value: 9999
0026 System monitoring status -	_	Preserved address, cannot be read out.
register		
0021 Power off protection setting –	_	Preserved address, cannot be read out.
0022 Power off protection voltage –	_	Preserved address, cannot be read out.
0023 External control setting F	F7060023 <mark>004E</mark> ECA2	Set external control as 'N' , OFF
F	F7060023 <mark>0045</mark> AD65	Set external control as 'E', ON
0024 Oil level monitoring setting -	_	Preserved address, cannot be read out.
0025 Air pressure monitoring F	F7060025 <mark>004E</mark> 0CA3	Set air pressure monitoring as 'N' , OFF
setting F	F7060025 <mark>0045</mark> 4D64	Set air pressure monitoring as 'E', ON
0100 Current status of channel 1 -	_	Force to change current state with code 05
0110 Lubrication control mode of -	_	Preserved address, cannot be read out.
channel 1		
0111 Lubrication control parameter of F	F7060111 <mark>03E8</mark> CC1B	Combine with high order data 0000, the
channel 1 (low)		parameter is 1000.
0112 Lubrication control parameter of F	F7060112 <mark>0000</mark> 3CA5	
channel 1 (high)		
0113 Lubrication remaining –	_	Preserved address, cannot be read out.

	parameter of channel 1 (low)		
0114	Lubrication remaining	_	Preserved address, cannot be read out.
	parameter of channel 1 (high)		
0120	Pause control mode of	F7060120 <mark>0043</mark> DC9B	Set PAUSE control mode as 'C' (Counter)
	channel 1		
0121	Pause control parameter of	F7060121 <mark>423F</mark> BC1A	Combine high order data 000F, set PAUSE
	channel 1 (low)		parameter as 999999
0122	Pause control parameter of	F7060122 <mark>000F</mark> 7CAE	Must write high-order first, then low-order.
	channel 1 (high)		
0123	Pause remaining parameter	_	Preserved address, cannot be read out.
	of channel 1 (low)		
0124	Pause remaining parameter	_	Preserved address, cannot be read out.
	of channel 1 (high)		
0130	Pulse current on time of	F7060130 <mark>001E</mark> 1CA7	Set pulse current on time as 0.3s
	channel 1		
0131	Pulse interval time of channel	_	Preserved address, cannot be read out.
	1		
0132	Pulse ratio of channel 1	F7060132 <mark>0002</mark> BCAE	Set pulse ratio as 2:1
0133	fine adjustment for oil	F7060133000AECA8	Set adjustment as 0.1s
	injection of channel 1		
0140	Monitoring signal level setting	_	Preserved address, cannot be read out.
0141	Monitoring signal status	_	Preserved address, cannot be read out.
0142	Set signal monitoring	F7060142 <mark>0001</mark> FD74	Set signal monitoring parameter as 1min
	parameter of channel 1		
0143	Signal monitoring remaining	_	Preserved address, cannot be read out.
	parameter of channel 1		
0144	signal counter		Preserved address, cannot be read out.

4: Force channel status change (force single coil)

Function code: 05 H Broadcast is supported

Address	Description	Example	Meaning (figures in this column are decimal)
0000	Force channel 1 as	F70500000000D95C	
	0		
0000	Force channel 1 as	F7050000FF0098AC	
	1		
0001	Force channel 2 as	F70500010000889C	Force change succeed. The data frame that the slave
	0		station responses is an echo of the query
0001	Force channel 2 as	F7050001FF00C96C	
	1		
FFFE	Force system as 0	F705FFFE000088D8	Received the command, system reboot.
FFFE		0005FFFE00009DFF	Reboot all online slaves by broadcasting method

(please note RED station number 0)	(please note RED station number 0)	
------------------------------------	------------------------------------	--

5: Error code

Function code: slave received function code +80H

code	Description	Meaning (figures in this column are decimal)
01	Illegal function	The function code received in the query is not an allowable
		action for the slave
02	Illegal data address	The data address received in the query is not an allowable
		address for the slave.
03	Illegal data	The value contained in the data field is not an allowable value
		for the slave.
06	Slave device busy	Slave device is engaged. Typical reasons are the salve is busy
		in processing a local manual operation or setting parameters.
07	Negative	The slave cannot perform the program function received in the
	acknowledge	query.

If the CRC check error occurs in the frame slave received, or parity error occurs in data transmission, slave will remain silence.
